- Waterways
- Inundation (1% AEP storm tide + 10% AEP rainfall)*
 - 0.0 m sea level rise
 - 0.8 m sea level rise

*These inundation extents combine both storm tide and catchment flooding events, in relation to sea level rise.

AEP: Annual exceedance probability (AEP) is the probability of an event occurring in a given year.

All future hazard extents have been estimated based on “present day” ground and sea bed elevations (topography and bathymetry). Estimates do not consider possible future shoreline changes as part of calculations.
